… looking for pioneer…

Senior Web Engineer (permanent employee)
for our office in Düsseldorf

Responsibilities:

- Design and build an internal API as an interface for our client software
- Build and extend our Javascript-based HTML5 Reader and client application
- Thoroughly test and maintain code
- Develop infrastructure and internal services

Requirements:

- 3-5 years relevant work experience, specifically at least 3 years with modern web development frameworks (Java or Python)
- Experience with front-end technology, including HTML
- in depth knowledge of JavaScript and common frameworks such as JQuery
- Experience in responsive design and templating with (X)HTML and CSS
- Experience with Twitter Bootstrap is a plus
- Deep understanding of software development
- Complete knowledge of BDD, including acceptance, integration and unit tests
- Mastery of entire technology stack, from web server (NGinx) via ORM (Django) to database (Postgres)
- Good communication skills, able to give your opinion when consulted
- Ability to work in and flexible development environment

Preferred, but not required

- Decent understanding of Javascript libraries like backbone, CSS frameworks like Bootstrap and Django web development framework (Python)
- Knowledge of SQL and query optimization

If this interests you and you think you meet these requirements, send us an application, including CV and sample code.
